

Revercell activates survival genes or sirtuins, slowing down the aging process, and its antioxidant content helps reduce damage from free radicals.

Thanks to its Coenzyme Q10 content, it improves cellular efficiency, particularly mitochondrial function.

It contains powerful antioxidants such as lycopene, superoxide dismutase, and resveratrol that protect cells from aging.

It increases the body's regenerative capacity.

It helps reduce the risks of complications from type 2 diabetes, hypertension, and cardiovascular diseases.

It reduces subclinical inflammation.

Finally, the ergogenics in the formula increase energy during the day, and sleep inducers like valerian and passionflower are excellent sleep inducers at night.

## Benefits

- Provides support in treating Metabolic Syndrome
- Helps prevent Diabetes Type II
- Cardio protective effect
- Supports stabilizing blood pressure
- Circadian Rhythm homeostasis to help provide better rest and sleep cycles

## Highlights

- Stimulates survival genes (sirtuins) to slow down aging.
- Lycopene, superoxide dismutase, and resveratrol for antioxidant protection.
- Coenzyme Q10 improves efficiency and mitochondrial function.
- Contributes to reducing risks of cardiovascular diseases, diabetes, and hypertension.

## Recommended Use

- **Preventive Action:** Take 1 white capsule in the morning, 1 white/red capsule in the afternoon, and 1 red capsule in the evening.
- **Adjunct Action:** Take 2 white capsules in the morning, 2 white/red capsules in the afternoon, and 2 red capsules in the evening.
