

With age, organ functionality progressively declines due to cellular deterioration, primarily caused by oxidative stress, resulting in a loss of vitality and quality of life.

This organic subfunctionality predisposes individuals to chronic degenerative diseases.

Damage from oxidative stress includes hepatic and degenerative diseases.

The provision of cellular extracts, cytokines, and embryonic growth factors exerts a renewing and revitalizing effect at the cellular level, increasing the specific functionality of the organ being treated.

Antioxidant enzymes neutralize free radicals, reducing oxidative stress damage.

Benefits

- Revitalizes cells of the immune system
- Aides in prevention of degenerative diseases
- Promotes production of lymphocytes, neutrophils and monocytes (macrophages)
- Contributes to a fortified immune system with optimal immune response towards disease

Highlights

- It includes homeotherapeutic cellular extracts from Lung, Thymus, Placenta, and Embryonic Mesoderm. These provide essential nutrients for the cells and tissues associated with immune function.
- It contains Antioxidant Enzyme Complexes to combat free radicals and reduce oxidative stress.

Recommended Use

- **Preventive Action:** Take 2 tablets in the morning and 2 tablets at night, for at least 3 months.
- **Adjuvant Action:** Take 2 tablets in the morning and 2 tablets at night, for at least 6 months.
