

With age, organ functionality progressively declines due to cellular deterioration, primarily caused by oxidative stress, resulting in a loss of vitality and quality of life.

This organic subfunctionality predisposes individuals to chronic degenerative diseases.

Damage from oxidative stress includes hepatic and degenerative diseases.

The provision of cellular extracts, cytokines, and embryonic growth factors exerts a renewing and revitalizing effect at the cellular level, increasing the specific functionality of the organ being treated.

Antioxidant enzymes neutralize free radicals, reducing oxidative stress damage.

Benefits

- Contributes to improving and enhancing cognitive functions
- Revitalizes the cells of the nervous system
- Promotes optimal neuronal functions
- Can help prevent degenerative disease in the Central Nervous System and brain

Highlights

- It includes homeotherapeutic cellular extracts from Brain, Hypothalamus, Pituitary, Adrenals, Thymus, and Embryonic Endoderm. These provide essential nutrients for the cells and tissues associated with central nervous system function.
- It contains Antioxidant Enzyme Complexes to combat free radicals and reduce oxidative stress.

Recommended Use

- **Preventive Action:** Take 2 tablets in the morning and 2 tablets at night, for at least 3 months.
- **Adjuvant Action:** Take 2 tablets in the morning and 2 tablets at night, for at least 6 months.
