

With aging, organ functionality gradually decreases due to cellular deterioration, primarily caused by oxidative stress, resulting in a loss of vitality and quality of life.

This decline in organ function predisposes individuals to chronic degenerative diseases.

Damage caused by oxidative stress includes trauma, exhaustion, and overtraining.

The inclusion of cellular extracts, cytokines, and embryonic

growth factors provides a revitalizing and renewing effect at the cellular level, improving the specific functionality of the affected organ.

Antioxidant enzymes neutralize free radicals, thus reducing oxidative stress damage.

The components of the formula reach cells directly or indirectly through the bloodstream, especially in the case of oral products, and are selectively incorporated into cells through various means of cellular transport.

Benefits

- Regulates efficient metabolic functions
- Stimulates hormonal balance of the thyroid gland
- Hormonal production homeostasis
- Stabilizes thyroid gland mechanisms
- Can help mitigate hyperthyroidism or hypothyroidism effects.

Highlights

- It includes homeotherapeutic cellular extracts from Adrenals, Thymus, Placenta, and Embryonic Mesoderm. These provide essential nutrients for the cells and tissues associated with thyroid function.
- It contains Antioxidant Enzyme Complexes to combat free radicals and reduce oxidative stress.

Recommended Use

- **Preventive Action:** Take 2 tablets in the morning and 2 tablets at night, for at least 3 months.
- **Adjuvant Action:** Take 2 tablets in the morning and 2 tablets at night, for at least 6 months.
